

# Feedback Escalation System – Vercel Setup Guide

**Yes, it is real time.** The Google Sheet is the database. The moment a parent submits the form, a small trigger in the sheet calls your Vercel app: the ticket is created in a new tab **FB Tickets** and the escalation email goes out within seconds. The dashboard reads the sheet live and refreshes itself every 60 seconds. Old responses (before go-live) are imported as tickets **without** sending emails.

## Part A – Google side (10 min)

### 1 Share the feedback sheet with your service account

Open *BIPS - Feedback Form (Responses)* → **Share** (top right) → paste `sales-report-reader@bodyzone-reports.iam.gserviceaccount.com` → role **Editor** → untick "Notify people" → **Share**.

Editor is needed because the app writes the **FB Tickets** tab. It never changes "Form responses 1".

### 2 Keep the service-account key ready

Use the same JSON key file you used for the Trainer FMS agent. Open it in Notepad; you need the value of `"private_key"` (starts with `-----BEGIN PRIVATE KEY-----`). If you don't have the file: Google Cloud Console → IAM & Admin → Service Accounts → sales-report-reader → **Keys** → Add key → JSON. Make sure **Google Sheets API** is enabled in that project (APIs & Services → Library).

### 3 Create a Gmail App Password (to send emails from mis.gcs1@gmail.com)

Sign in as mis.gcs1@gmail.com → open `myaccount.google.com/apppasswords` (2-Step Verification must be ON; turn it on under Security if asked) → App name `BIPS Feedback` → **Create** → copy the 16-letter password shown in the yellow box.

## Part B – Upload to GitHub and Vercel (10 min)

### 4 Upload the folder to GitHub

Go to `github.com` (account mishead32) → + (top right) → **New repository** → name `bips-feedback-escalation` → **Private** → **Create repository**. On the next page click **uploading an existing file**. Open *Documents\Feedback escalation system\BIPS* in File Explorer, select **everything inside** (Ctrl + A) and drag it into the browser. Click **Commit changes**.

Drag the **contents** of the BIPS folder, so that `package.json`, `api`, `lib`, `public` sit at the top of the repository (not inside another folder).

### 5 Import into Vercel

`vercel.com` → **Add New...** → **Project** → pick `bips-feedback-escalation` → **Import**. Framework Preset: **Other**. Leave Build settings as they are. Open **Environment Variables** and add these one by one (Name → Value → Add):

| Name                         | Value                                                        |
|------------------------------|--------------------------------------------------------------|
| SHEET_ID                     | 1CythY7ID6i0UqX8MEsSQkQgTV5F3cLtlk3jq2t3ocH8                 |
| GOOGLE_SERVICE_ACCOUNT_EMAIL | sales-report-reader@bodyzone-reports.iam.gserviceaccount.com |

|                    |                                                                                                                        |
|--------------------|------------------------------------------------------------------------------------------------------------------------|
| GOOGLE_PRIVATE_KEY | the private_key from step 2 – everything between the quotes, including ----<br>-BEGIN... and ...END PRIVATE KEY-----\n |
| EMAIL_USER         | mis.gcs1@gmail.com                                                                                                     |
| EMAIL_APP_PASSWORD | 16-letter password from step 3                                                                                         |
| ESCALATE_TO        | Indu Ma'am's email,Poonam Gulati Ma'am's email (comma, no space)                                                       |
| CC                 | Principal's email                                                                                                      |
| MIS_EMAIL          | mis.gcs1@gmail.com                                                                                                     |
| DASHBOARD_PASSWORD | a password for the dashboard                                                                                           |
| SYNC_SECRET        | any long random text, e.g. bips-sync-7Hq29xLm                                                                          |
| CRON_SECRET        | another long random text                                                                                               |

**Test first:** put **your own email** in ESCALATE\_TO and CC. Change them to the real emails after the test (step 10).

Click **Deploy**. After about a minute you get a URL like `https://bips-feedback-escalation.vercel.app`.

## 6 Check the setup

Open `https://YOUR-URL.vercel.app/api/health?key=YOUR_DASHBOARD_PASSWORD`

**Expected:** every item under “checks” shows **true** and “sheet” shows **OK** – **tabs: Form responses 1, ...**  
If you see “access denied”, redo step 1.

## 7 Open the dashboard

Open `https://YOUR-URL.vercel.app` → enter the password.

**Expected:** the first load creates the tabs **FB Tickets** and **FB Settings** in your sheet and imports all old  
Overall ≤ 4 responses as tickets (no emails sent). The numbers appear on the dashboard.

# Part C – Real-time trigger in the sheet (5 min)

## 8 Paste the trigger script

In the feedback sheet: **Extensions** → **Apps Script**. Delete everything in Code.gs, paste the content of `apps-script\FormTrigger.gs`. Change the two lines at the top:

```
const APP_URL = 'https://YOUR-URL.vercel.app';
const SYNC_SECRET = 'the same SYNC_SECRET you put in Vercel';
```

Press `Ctrl + S`. Choose **installTriggers** in the function drop-down → **Run** → Review permissions  
→ your account → **Advanced** → **Go to ... (unsafe)** → **Allow**.

**Expected:** Execution log shows `200 {"ok":true,...}`.

## 9 Test the full flow

Fill the Google Form yourself with **Overall = 2**.

**Expected within a few seconds:** email “[ESCALATION] Parent Feedback – BIPS-FB-...”. Click **Submit Resolution** → write → submit → you get “Resolution received”. On the dashboard the ticket appears under **Send resolution to parent on WhatsApp** → open it → **Send on WhatsApp** (send it to your own number) → tap the link in the message → choose **Satisfied** → closure email arrives and the ticket closes.

10

## Go live

Vercel → your project → **Settings** → **Environment Variables** → edit ESCALATE\_TO and CC to the real emails → then **Deployments** → ⋮ on the latest → **Redeploy**. In the sheet's FB Tickets tab you may delete your test row.

## Part D – Optional: automatic WhatsApp through Meta (Cloud API)

If these settings are **not** added, everything works with the manual **Send on WhatsApp** button. When they **are** added, the system sends these 3 messages to the parent by itself:

| When                                            | Message sent automatically                  | Template name      |
|-------------------------------------------------|---------------------------------------------|--------------------|
| Indu Ma'am / Poonam Ma'am submit the resolution | Resolution + Satisfied / Not Satisfied link | bips_resolution    |
| Parent is Satisfied                             | Ticket closed – thank you                   | bips_ticket_closed |
| Parent is Not Satisfied                         | Escalated again – reply within 24 hrs       | bips_reescalated   |

The first feedback message to all parents stays manual, as you wanted.

### D1 Copy the Phone Number ID

`developers.facebook.com` → **My Apps** → your app → **WhatsApp** → **API Setup**. Under “From”, choose the school's number and copy the **Phone number ID** (a long number – not the phone number itself).

### D2 Create a permanent access token

`business.facebook.com` → **Settings** (gear) → **Users** → **System users** → **Add** → name `bips-feedback`, role **Admin**. Click **Assign assets** → select your **App** (Full control) and your **WhatsApp account** (Full control) → Save. Click **Generate new token** → choose your app → Token expiration: **Never** → tick `whatsapp_business_messaging` and `whatsapp_business_management` → **Generate** → copy the token (it is shown only once).

Do not use the 24-hour “temporary access token” from the API Setup page – it stops working the next day.

### D3 Create the 3 message templates

`business.facebook.com` → **WhatsApp Manager** → **Message templates** → **Create template**. For each: Category **Utility**, Name exactly as below, Language **English**. Paste the Body text. Meta asks for “sample” values for each `{{number}}` – type any example. **Submit**. Approval usually takes a few minutes (max 24 hours).

#### 1) Name: `bips_resolution`

Dear {{1}},

Greetings from BIPS!

Thank you for sharing your feedback regarding {{2}}. We have reviewed your concern carefully.

Ticket No: {{3}}

Your concern: {{4}}

Action taken: {{5}}

Kindly tap the link below and let us know if you are satisfied with the action taken: {{6}}

Warm regards,

Bhupindra International Public School

## 2) Name: bips\_ticket\_closed

Dear {{1}},

Thank you for confirming. We are glad your concern has been resolved, and your ticket {{2}} is now closed.

We truly value your partnership in {{3}}'s growth. Please feel free to reach out anytime.

Warm regards,

Bhupindra International Public School

## 3) Name: bips\_reescalated

Dear {{1}},

We regret that the action taken did not fully meet your expectations. Your concern (Ticket {{2}}) has been escalated again to senior management, and we will get back to you within 24 hours.

Warm regards,

Bhupindra International Public School

## D4 Add 3 settings in Vercel and redeploy

| Name               | Value                                                            |
|--------------------|------------------------------------------------------------------|
| WA_TOKEN           | the permanent token from D2                                      |
| WA_PHONE_NUMBER_ID | the Phone number ID from D1                                      |
| WA_LANG            | en (if you chose "English (US)" for the templates, write en_US ) |

Then **Deployments** → ... → **Redeploy**.

**Check:** open `/api/health?key=YOUR_PASSWORD` → "whatsapp" shows **ON – school name (number)**.

## D5

**Test**

Submit the form with your own mobile number and Overall = 2 → submit a resolution from the email → within seconds the WhatsApp arrives on your phone with the link. Tap it → Satisfied → you get the “ticket closed” WhatsApp.

If a message cannot be sent (template not approved yet, wrong number, parent not on WhatsApp), nothing breaks: the ticket History shows the reason and the ticket appears in **Send resolution to parent on WhatsApp** so the team can send it manually. Meta charges per conversation as per its WhatsApp pricing for India (Utility category).

## What happens automatically

| When                              | Action                                                                                                                                                                                       |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| New response, Overall ≤ 4         | Ticket + escalation email (To Indu Ma'am & Poonam Gulati Ma'am, CC Principal) with Submit Resolution button                                                                                  |
| Resolution submitted              | Alert email to MIS; ticket shows “Send on WhatsApp”                                                                                                                                          |
| No resolution in 24 hrs           | Reminder email (checked every hour, max one per day per ticket)                                                                                                                              |
| WhatsApp resolution message       | Contains a personal link. The parent taps it and selects <b>Satisfied</b> or <b>Not Satisfied</b> (remarks compulsory if Not Satisfied). The ticket updates by itself and MIS gets an email. |
| Parent Satisfied                  | Ticket closed + closure email                                                                                                                                                                |
| Parent Not Satisfied              | Re-escalation email (level 2, 3...) + new 24-hour deadline                                                                                                                                   |
| WhatsApp sent, no reply in 24 hrs | Dashboard flags “Call parent”                                                                                                                                                                |

## Good to know

- Without Part D, WhatsApp messages are manual: the dashboard opens WhatsApp with the message (and the parent's Satisfied / Not Satisfied link) already typed – you press send.
- Indu Ma'am / Poonam Ma'am** mark an issue resolved by clicking **Submit Resolution** in their email and writing the action taken. **Parents** confirm through their link. If a parent answers on a call instead, record it in the ticket (Step 2 buttons).
- A 5-star response with a complaint: **All feedback** tab → **Escalate**.
- Gmail sends to about 500 recipients a day through the app password – more than enough.
- Don't rename **Form responses 1**, **FB Tickets** or **FB Settings**, and don't reorder FB Tickets columns.
- Changing a setting in Vercel always needs a **Redeploy** to take effect.

# Dashboard preview (test data)
